

No Build 2010 - Sunday

This video shows a computer generated simulation of how traffic would back up in the year 2010 during the peak Sunday traffic volume period if nothing is changed at the existing Toll Plaza. The existing configuration has 16 toll booths with 8 in each the North Bound direction and 8 in the South Bound direction. Yellow cars indicate cash paying customers, while blue cars represent EZ-Pass customers. As expected there are significant delays.
