

SPECIAL ATTENTION

The Design-Builder is advised that the existing paint system(s) on the existing bridge is lead-bearing paint (LBP) and contains hazardous concentrations of lead.

The Contractor performing any construction and demolition activities involving bridge components with LBP (e.g. flame cutting, rivet busting, removal of bridge members, etc.) shall comply with the applicable worker protection provisions of OSHA 1926.62, Lead Exposure in Construction Final Rule, and the environmental protection requirements of the NH Department of Environmental Services.

The Design-Builder shall submit to the Department a compliance plan including worker protection and environmental protection measures. The Contractor shall not commence with bridge construction/demolition activities without approval of compliance plan.

Reference to these regulations shall not preclude or preempt any local, State or Federal regulations that may apply.

The Design-Builder will not be held responsible for the abatement of pre-existing conditions at the bridge site involving LBP.
