

Variables

Figure the flexible fact, tra la
Exact as an impulse to act, tra la
There's the variable cost of kilowatt hours
And the lost surplus fuel from the ground into towers

The wages of variable workmen's dismay
With skills to set up a solar array
No matter the patter of rain on the roof
The average year's gain from the sun will be proof

That fuel is free from the sun and the wind
But flexible facts deal with oil that has been
Our trust and our must to lead us to fights
For power to import and marketing rights

Yet glass in the solar arrays is not lacking
Only needs mass production for flexible facting
So in order to search the tax saving good charities
Just fund some good solar variable verities.

So replace some of your use of aging nuclear and coal fired
electric plants by making out a check to the RiverWoods
Solar fund which ~~needs only \$1454.~~ to save \$236. a year at
present prices. Done by end of April 2002.

The saving in greenhouse gasses and unhealthy pollution is
great. This is your chance to be part of the solution
after years of being part of the problem.

Joan Darlington

I hope the ways of improving coal plants will be used!
Years ago Vick Mathur at UNH seemed to have better methods
and I never heard whether they were implemented!
