IS 703: NIMS Resource Management CREF #10-2-EMI-2

This 2-day course will provide the principles, tools, processes, and systems used in the NIMS that incident managers need for timely and effective resource management during an incident. Primary tasks addressed in this course are:

- Establishing systems for describing, inventorying, requesting, and tracking resources;
- Activating these systems prior to and during an incident;
- Dispatching resources prior to and during an incident; and
- Deactivating or recalling resources during or after incidents.

After beginning with resource management concepts and principles, the course then addresses how to get an organization ready for managing resources in disasters. The focus then continues on management of resources during an incident and on to a complex incident. Finally, there is a section about reassessing readiness in the post-incident period followed by a summary and conclusion.
