GENERAL NOTES

1. At interchange ramps, delineators shall be located along the outside of the curve. This does not preclude their use on both sides where needed for clear indication of the alignment.

2. Continue normal delineator spacing on right side of ramps if radius of curves are greater than 300 meters or tangent (see STD. NO. DL-1).

3. When the radius of right hand curves on ramps and loops are less than 300 meters, delineate the left side (outside of curve) of each ramp or loop from the PC to the PT or carry delineation on the right side for a minimum overlap of 2 delineators. Where delineation is terminated on the left side, begin delineation again on the right side with a minimum overlap of 2 delineators. When the gap on the right side is less than 150 meters, continue the delineators on the right side through the curve.

4. On speed change lanes the delineators shall be installed on the right for right hand connections, and on the left for left hand connections. Double delineators shall be installed at 20 meter intervals along acceleration and deceleration lanes.

All dimensions shown are in kilometers or meters. Whole numbers indicate kilometers; decimal numbers indicate meters unless otherwise noted.
