Governor Hassan Urges House Committee to Oppose Legislation Prohibiting State Implementation of Clean Power Plan

CONCORD – Continuing her efforts to protect the environment and to ensure that New Hampshire remains a leader in combating climate change, Governor Maggie Hassan today sent a letter to the House Science, Technology, and Energy Committee in opposition to House Bill 1659, relative to the implementation of the clean power state implementation plan, which would prohibit a state implementation plan.

"New Hampshire has long been a leader in combating climate change and cutting carbon emissions," Governor Hassan wrote. "Through programs like the Regional Greenhouse Gas Initiative (RGGI), our state and region have reduced harmful emissions, created jobs, and encouraged innovation across our clean energy economy. The Clean Power Plan is an important step forward at the national level to address carbon emissions and climate change, and it is equally important that New Hampshire develop its own plan that meets our state's needs, as opposed to having a plan imposed on us by the federal government."

As a State Senator, Governor Hassan sponsored New Hampshire's original Regional Greenhouse Gas Initiative (RGGI) legislation, which has brought numerous benefits to the Granite State, including reducing harmful emissions and helping to reduce energy costs, create jobs and encourage innovation in the state's clean-energy economy. She also helped enact the state's Renewable Portfolio Standard (RPS) law and consistently fights for clean air and water.

As Governor, she has signed bipartisan legislation to help maximize the benefits of RGGI for New Hampshire ratepayers, to update the RPS law and to establish a long-term New Hampshire Energy Strategy. New Hampshire also joined the Under 2 MOU in October 2015, a global compact among cities, states and provinces worldwide that supports the state's efforts to combat climate change.

"At a time when we need to continue the progress we have made to reduce power plant emissions, to reduce our energy usage, and to reduce risks and prepare for the impacts of climate change, this legislation would pull us backward," Governor Hassan wrote. "Instead, we should focus on creating a robust state implementation plan that will continue our important work to combat climate change, and keep the planning process in the State's hands."

In November 2015, the New Hampshire Attorney General's Office joined 24 states, cities and counties in filing a motion to intervene to defend the Clean Power Plan.

The full text of the Governor's letter to the House Science, Technology, and Energy Committee is below.

February 2, 2016

The Honorable Robert Introne
Chairman, House Science, Technology, and Energy Committee
Legislative Office Building, Room 304
Concord, New Hampshire 03301

Dear Chairman Introne and Members of the Committee:

I write to you today in opposition to HB1659, a bill that would prohibit the Department of Environmental Services from expending funds to develop or implement a state implementation plan under the Clean Power Plan.

Innovate NH

Balanced Budget

Public Safety

New Hampshire has long been a leader in combating climate change and cutting carbon emissions. Through programs like the Regional Greenhouse Gas Initiative (RGGI), our state and region have reduced harmful emissions, created jobs, and encouraged innovation across our clean energy economy. The Clean Power Plan is an important step forward at the national level to address carbon emissions and climate change, and it is equally important that New Hampshire develop its own plan that meets our state's needs, as opposed to having a plan imposed on us by the federal government.

At a time when we need to continue the progress we have made to reduce power plant emissions, to reduce our energy usage, and to reduce risks and prepare for the impacts of climate change, this legislation would pull us backward. Instead, we should focus on creating a robust state implementation plan that will continue our important work to combat climate change, and keep the planning process in the State's hands.

From our mountains to our lakes to our beautiful seacoast, New Hampshire's natural resources are critical to our economy and define us as a state. Addressing climate change and the harmful impacts of carbon emissions are economic imperatives. We must continue to work to address these issues while ensuring that we have the tools to invest in new energy resources as we develop our own plan to implement the Clean Power Plan.

I respectfully urge you to vote this legislation inexpedient to legislate. Thank you for your consideration.

With every good wish,

Margaret Wood Hassan
Governor
