

Technical Large Animal Emergency Rescue

Awareness Level <i>no prerequisites required</i>	Tuesday August 4th	0800-1600hrs	Memorial Elementary School <i>55 Old Bedford Rd, Bedford NH 03110</i>
Operations Level <i>Awareness required</i>	Wednesday August 5th & Thursday August 6th	0800-1600hrs 0800-1600hrs	Bedford Fire Training Grounds <i>77 Chubbuck Road, Bedford NH 03110</i>
Technician Level <i>Operations and Swiftwater Rescue Level 1 required</i>	Friday August 7th	0800-1600hrs	Merrimack River, Station Road Boat Ramp <i>Bedford NH 03110</i>

The combined AWARENESS / OPERATIONAL/TECHNICIAN LEVEL Technical Large Animal Emergency Rescue (TLAERTM) training is a 4 day (32 hour) course consisting of lecture, demonstrations, and practicum hands-on laboratory techniques. Hands-on experience is provided for all students and the overarching emphasis of the use of Incident Command System is featured throughout the course, and this course is the model for NFPA 1670 standards (2014 edition) and the (in development) 1006 standards.

AWARENESS LEVEL is the basic skills and foundational understanding of behavior and scene management required to recognize the dangers specific to TLAER scenes.

OPERATIONAL LEVEL is intended for a specialized audience that needs to understand the specifics of TLAER operations and will expect to assist or complete live rescues.

TECHNICIAN LEVEL is intended for highly trained swiftwater/flood rescue team members.

All are combined in this FOUR DAY course.

Didactic instruction covers the foundation principles of all methodologies, techniques and procedures that are considered to reside within the "inventory" of modern tactics for response to the various types of TLAERTM rescue incidents; including a detailed overview of heavy / confined space / trench / fire / hazmat / swift & floodwater, unstable ground and vehicle extrication rescues, concluded with slingloading operations for large animal incidents. Incident Command System and the personnel that typically will respond with their duties and roles are introduced, with special attention to evacuation planning, disaster prevention, animal containment, and field euthanasia scenarios. Additionally, a heavy background is provided in the areas of large animal behavior in normal and rescue circumstances, critical medical issues encountered, and stress responses is woven throughout the course.

Practicum is intensive and emphasizes instruction in rescue scene management regarding animal behavior, roles of responders, use of containment and basic to advanced manipulation methods. Live animals will be used for simple live demonstrations, students will perform these procedures and techniques with supervision from an instructor, to include basic to advanced handling skills. The use of mannequins for the more difficult demonstrations (vertical lifts, recumbent animals, trapped in a confined space, etc.) and hands-on rope/mechanical advantage work is a feature of this course. Introductory Rope, Anchor, Mechanical Advantage skills will be taught and used throughout the course.

Tuition is covered through a State Homeland Security Program Training Grant
