CLINICAL BULLETIN

Bulletin #	Title			Date Issued
32	Hypoglycemia Protocol D10 maximum dose			February 5, 2016
Superseded	Released By	Approved By	Source	
	V. Blanchard	Dr. J. Suozzi		

The NH EMS Medical Control Board updated the 2015 Hypoglycemia protocol to remove the maximum dose of dextrose 10%. The board did not intend to restrict the administration of dextrose 10% if a patient remained hypoglycemic with associated altered mental status, therefore, the maximum dose of dextrose 10% has been removed from the protocol

The AEMT/Paramedic protocol now reads: Administer dextrose 10% IV via premixed infusion bag (preferred) or prefilled syringe until mental status returns to baseline and glucose level is greater than 70mg/dL. IV pump not required.
